# Multifunction Preset Counter

- Highly visible display with backlit negative transmissive LCD.
- Programmable PV color to visually alert when output status changes (screw terminal block models).
- Intuitive setting enabled using ergonomic up/down digit keys (4digit models) and DIP switch.
- Configurable as 1-stage counter, 2-stage counter, total and preset counter, batch counter, dual counter, or tachometer. (Configurability varies with model.)
- PNP/NPN switchable input.
- Finger-safe terminals (screw terminal block models).
- Meets a variety of mounting requirements: Screw terminal block models, and pin-style terminal models.
- NEMA4/IP66 compliance.
- Six-language instruction manual.

## ■ Model Number Legend

- 1. External connection None: Screw terminals 11: 11-pin socket
- 2. No. of digits None: 6 digits 4: 4 digits
- 3. Stage setting
  - None: 1-stage setting
  - U: Factory-set to 1-stage setting
  - W: Factory-set to 2-stage setting

#### 4. Output type

None: Contact output or contact and transistor in combination S: Transistor output

- 5. Supply voltage/external power supply
  - None: 100 to 240 VAC at 50/60 Hz with 12 VDC power supply D: 12 to 24 VDC without external power supply
  - D1: 12 to 24 VDC or 24 VAC at 50/60 Hz with 12 VDC power supply
- 6. Case color

#### None: Black

G: Light gray (Munsell 5Y7/1): Produced upon request.

Note: Can be used as a 2-stage counter. In this case, each output can be flexibly allocated to either stage 1 or 2.

## Accessories (Order Separately)

Name		Models		
Flush Mounting Adapter (See note	1.)	Y92F-30		
Waterproof Packing (See note 1.)		Y92S-29		
	11-pin	P2CF-11		
Socket	11-pin, finger-safe type	P2CF-11-E		
Back Connecting Socket	11-pin	P3GA-11		
	11-pin, finger-safe type	P3GA-11 with Y92A-48G (See note 2.)		
Hard Cover	·	Y92A-48		
Soft Cover		Y92A-48F1		
Mounting Track	50 cm (l) × 7.3 mm (t)	PFP-50N		
	1 m (l) × 7.3 mm (t)	PFP-100N		
1 m (l) × 16 mm (t)		PFP-100N2		
End Plate	·	PFP-M		
Spacer		PFP-S		

Note: 1. Supplied with screw-terminal models (i.e., excluding H7CX-A11□/-A114□ models).

2. Y92A-48G is a finger-safe terminal cover attached to the P3GA-11 Socket.

   Dual count calculating mode: SUB; output mode: K-2, D, L, or H in dual counter operation

## ■ Characteristics

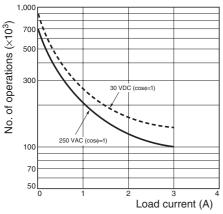

item	H7CX				
Insulation resistance	tween non-continuous contacts		terminal and exposed non-current-carrying metal parts, and be-		
Dielectric strength	2,000 VAC, 50/60 Hz for 1 min between current-carrying metal parts and non-current-carrying metal parts 2,000 VAC (for 100 to 240 VAC), 50/60 Hz for 1 min between power supply and input circuit (1,000 VAC for 24 VAC/ 12 to 24 VDC) 1,000 VAC (for H7CX-\BD/-\BD), 50/60 Hz for 1 min between control output, power supply, and input circuit (2,000 VAC for models other than H7CX-\BD/-\BD1) 1,000 VAC, 50/60 Hz for 1 min between non-continuous contacts				
Impulse withstand voltage		erminal and expos	1 kV for 24 VAC/12 to 24 VDC and 12 to 24 VDC ed non-current-carrying metal parts) for 100 to 240 VAC,		
Noise immunity	$\pm$ 1.5 kV (between power terminals) $\pm$ 600 V (between input terminals) Square-wave noise by noise simula		AC and 24 VAC/12 to 24 VDC, ±480 V for 12 to 24 VDC 100 ns/1 μs, 1-ns rise)		
Static immunity	Destruction: 15 kV Malfunction: 8 kV				
Vibration resistance			ude, four cycles each in three directions (8 minutes per cycle) ude, four cycles each in three directions (8 minutes per cycle)		
Shock resistance		Destruction: 294 m/s <sup>2</sup> each in three directions Malfunction: 98 m/s <sup>2</sup> each in three directions			
Life expectancy	Mechanical: 10,000,000 operations min. Electrical: 100,000 operations min. (3 A at 250 VAC, resistive load) See <i>Life-test Curve</i> on page D-60.				
Approved safety standards (See note 1.)	UL508/Listing, CSA C22.2 No. 14, conforms to EN61010-1 (Pollution degree 2/overvoltage category II) Conforms to VDE0106/P100 (finger protection).				
EMC	(EMI) Emission Enclosure: Emission AC mains: (EMS) Immunity ESD: Immunity RF-interference: Immunity Conducted Disturbance: Immunity Burst: Immunity Surge: Immunity Voltage Dip/Interruption	EN61000-4-4: EN61000-4-5:	<ul> <li>1 class A</li> <li>4 kV contact discharge (level 2)</li> <li>8 kV air discharge (level 3)</li> <li>10 V/m (Amplitude-modulated, 80 MHz to 1 GHz) (level 3);</li> <li>10 V/m (Pulse-modulated, 900 MHz ±5 MHz) (level 3)</li> <li>10 V (0.15 to 80 MHz) (level 3)</li> <li>2 kV power-line (level 3);</li> <li>1 kV I/O signal-line (level 4)</li> <li>1 kV line to lines (power and output lines) (level 2);</li> <li>2 kV line to ground (power and output lines) (level 3)</li> </ul>		
Degree of protection	Panel surface: IP66 and NEMA Typ	be 4 (indoors) (Se	e note 2.)		
Weight	Approx. 140 g				

Note: 1. To meet UL listing requirements with the H7CX-A11 models, an OMRON P2CF-11- or P3GA-11 Socket must be mounted on the H7CX. Otherwise, H7CX-A11 models are considered to meet UL508 recognition requirements.

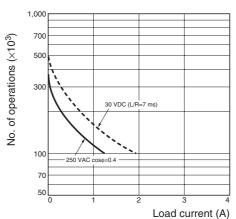

2. A waterproof packing is necessary to ensure IP66 waterproofing between the H7CX and installation panel.

## ■ Life-test Curve (Reference Values)

### **Resistive Load**

### **Inductive Load**

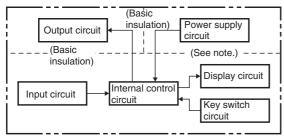

Reference: <u>A current of 0.15 A max. can be switched at 125 VDC (cos =1)</u> and current of 0.1 A max. can be switched if L/R=7 ms. In both cases, a life of 100,000 operations can be expected. The minimum applicable load is 10 mA at 5 VDC (failure level: P).

## ■ Inrush Current (Reference Values)

Model	Voltage	Applied voltage	Inrush current (peak value)	Time
H7CX-A11/-AW	100 to 240 VAC	264 VAC	5.8 A	0.7 ms
H7CX-A11D1/-AWD1	24 VAC/12 to 24 VDC	26.4 VAC	10.4 A	1.2 ms
H7CX-AD	12 to 24 VDC	26.4 VDC	6.0 A	1.2 ms

# Connections

## Block Diagram

Note: All models except for H7CX-DD (models with 12 to 24-VDC power supplies) have basic insulation.

## ■ I/O Functions

### Using as a Counter

Inputs	CP1, CP2	<ul> <li>In general (except for dual counter mode) Reads counting signals Increment, decrement, command, individual, and quadrature inputs accepted.</li> </ul>
		<ul> <li>When used as a dual counter Reads CP1 count signals with CP1 input and CP2 count signals with CP2 input. Increment signals can be input.</li> </ul>
	Reset or Reset 1	<ul> <li>In general (except for dual counter mode) Resets present value and outputs (OUT2 when using the batch counter). (See note 1.) Counting cannot be performed during reset/reset 1 input. The reset indicator is lit during reset input.</li> </ul>
		<ul> <li>When used as a dual counter Resets the CP1 present value (to 0).</li> <li>Counting for CP1 input cannot be performed during reset 1 input.</li> <li>The reset indicator is lit during reset 1 input.</li> </ul>
	Total Reset or Reset 2 (See note 2.)	<ul> <li>When used as a 1-stage/2-stage counter Does not operate (Not used).</li> <li>When used as a total and preset counter</li> </ul>
		Resets the total count value. Holds the total count value at 0 during total reset input.
		<ul> <li>When used as a batch counter Resets the batch count value and batch output (OUT1).</li> <li>Holds the batch count value at 0 during reset 2 input.</li> </ul>
		<ul> <li>When used as a dual counter Resets the CP2 present value.</li> <li>Counting for CP2 input cannot be performed during reset 2 input.</li> </ul>
Outputs	OUT1, OUT2	Outputs take place according to designated output mode when corresponding preset is reached.

Note: 1. In increment mode or increment/decrement mode, the present value returns to 0; in decrement mode, the present value returns to the set value with 1-stage models, and returns to set value 2 with 2-stage models.

2. The reset indicator will not be lit when the total reset or reset 2 input is ON.

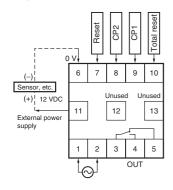

### Using as a Tachometer

Inputs	CP1, CP2	Reads counting signals. (CP2 input is not used.)
	Reset 1, Reset 2	Holds the measurement value and outputs. (Reset 2 input is not used.) The reset indicator is lit during hold.
Outputs	OUT1, OUT2	Outputs signals according to the specified output mode when a set value is reached.

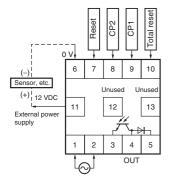

## Terminal Arrangement

Confirm that the power supply meets specifications before use. Recommended power supply; eg. OMRON S8VS or S82K.

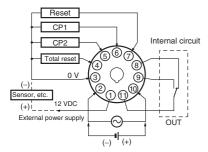

#### H7CX-A/-A4 1-stage Contact Output

H7CX-AS/-A4S 1-stage Transistor Output

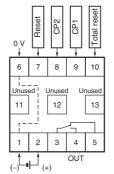

### H7CX-A11/-A114/-A11D1/-A114D1 1-stage Contact Output

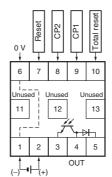

Note: Do not connect unused terminals as relay terminals.

#### H7CX-AD/-A4D 1-stage Contact Output

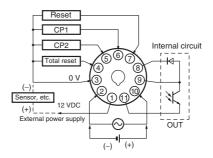

Note: Terminals 1 and 6 are connected internally.

### H7CX-ASD/-A4SD 1-stage Transistor Output

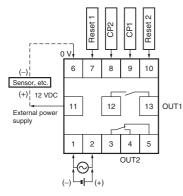

Note: Terminals 1 and 6 are connected internally.

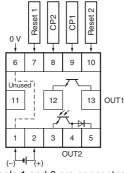

#### H7CX-A11S/-A114S/-A11SD1 1-stage Transistor Output

#### H7CX-AW/-A4W/-AWD1 2-stage Contact Output

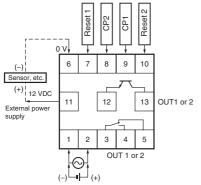

H7CX-AWSD/-A4WSD 2-stage Transistor Output

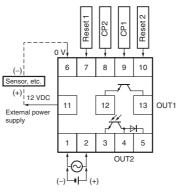

Note: 1. Terminals 1 and 6 are connected internally.2. Do not connect unused terminals as relay terminals.

#### H7CX-AU/-AUD1 1-stage Contact, 1-stage Transistor Output

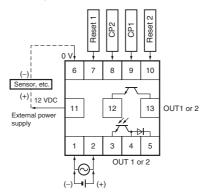

Note: Each output can be flexibly allocated to either stage 1 or 2 by setting in function selection mode.

### H7CX-AWS/-AWSD1 2-stage Transistor Output

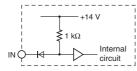

### H7CX-AUSD1 1 or 2-stage Transistor Output

Note: Each output can be flexibly allocated to either stage 1 or 2 in function selection mode.

## ■ Input Circuits

### CP1, CP2, Reset/Reset 1, and Total Reset/Reset 2 Input

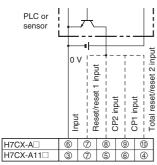

Note: The circuit shown above is for no-voltage input (NPN input).

## Input Connections

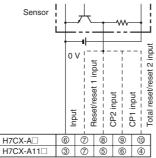

The inputs of the H7CX are no-voltage (short-circuit or open) inputs or voltage inputs.

### No-voltage Inputs (NPN Inputs)

### **Open Collector**

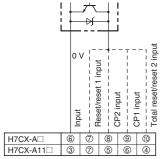

Operates when the transistor turns ON.

Operates when the transistor turns ON.

### No-voltage Input Signal Levels

No-contact input	Short-circuit level Transistor ON Residual voltage: 3 V max. Impedance when ON: 1 K $\Omega$ max. (The leakage current is 5 to 20 mA when the impedance is 0 $\Omega$ .)
	Open level Transistor OFF Impedance when OFF: 100 KΩ min.
Contact input	Use contact which can adequately switch 5 mA at 10 V. Maximum applicable voltage: 30 VDC max.

### **DC Two-wire Sensor**

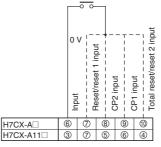

Operates when the transistor turns ON

### **Applicable Two-wire Sensor**

Leakage current:1.5 mA max. Switching capacity:5 mA min. Residual voltage:3 VDC max. Operating voltage:10 VDC

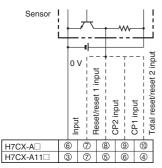

### **Contact Input**

Operates when the contact turns ON.

### Voltage Inputs (PNP Inputs)

### No-contact Input (NPN Transistor)

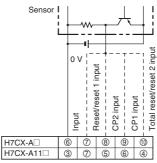

Operates when the transistor turns OFF.

### **Voltage Input Signal Levels**

High level (Input ON): Low level (Input OFF): Maximum applicable voltage: Input resistance:

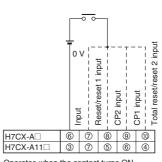

4.5 to 30 VDC 0 to 2 VDC 30 VDC max. Approx.  $4.7~\mathrm{k}\Omega$ 

### No-contact Input (PNP Transistor)

Operates when the transistor turns ON.

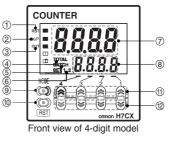

### **Contact Input**

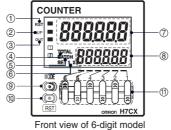

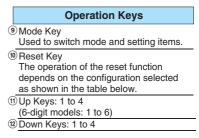

Operates when the contact turns ON.

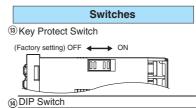

## Nomenclature

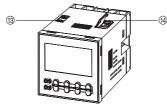

#### Indicators 1 1 Reset Indicator (Orange) 2 Lit when the reset input (1) or reset key is ON. 3 Key Protection Indicator (Orange) ③ Control Output Indicator (Orange) OUT: One stage OUT1, OUT2: Two stages ④ Total Count Indicator Lit when the total count value is displayed. ⑤ Batch Indicator Lit when the batch count value is displayed. 6 Set Value 1, 2 Stage Indicator ⑦ Present Value (Main Display) Character height: 11.5 mm (6-digit: 9mm) ⑧ Set Value (Sub-display) Character height: 6 mm

### **Reset Operation by Reset Key**

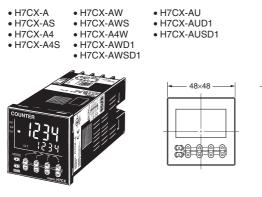

Configuration	Reset operation
1-stage/2-stage counter	Resets the present value and outputs.
Total and preset counter	<ul> <li>Resets the present value and outputs.</li> <li>When the total count value is displayed, resets the present value, the total count value, and outputs.</li> </ul>
Batch counter	<ul> <li>Resets the present value and OUT2.</li> <li>When the batch count value is displayed, resets the present value, the batch count value, and outputs.</li> </ul>
Dual counter	Resets the CP1 present value, CP2 present value, dual count value, and outputs.
Tachometer	Maintains the measured value and outputs (hold function).

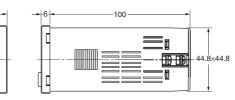

# Dimensions

Note: All units are in millimeters unless otherwise indicated.

## ■ Counter (without Flush Mounting Adapter)

### Screw-terminal Models with External Power Supplies (Flush Mounting)

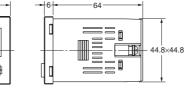

Note: M3.5 terminal screw (effective length: 6 mm)

### Screw-terminal Models without External Power Supplies (Flush Mounting)

- H7CX-AWSD • H7CX-AD • H7CX-ASD • H7CX-A4D • H7CX-A4SD H7CX-AWSD

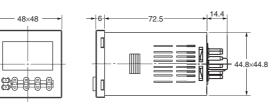

Note: M3.5 terminal screw (effective length: 6 mm)

### 11-pin Socket Models (Flush Mounting/Surface Mounting)

- H7CX-ASD • H7CX-A4WSD
- H7CX-A4D

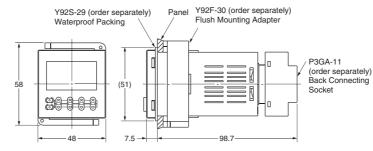

## 11-pin Socket Models

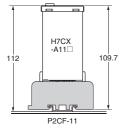

(Adapter and Waterproof Packing Ordered Separately)

- H7CX-A11 • H7CX-A11S • H7CX-A11D1 H7CX-A11SD1
- H7CX-A114 • H7CX-A114S • H7CX-A114D1

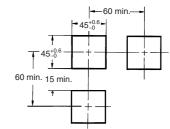

## Dimensions with Front Connecting Socket

Note: These dimensions vary with the kind of DIN-rail (reference value).

### **Panel Cutouts**

Panel cutouts are as shown below. (according to DIN43700).

- Note: 1. The mounting panel thickness should be 1 to 5 mm.
  - 2. To allow easier operability, it is recommended that Adapters are mounted so that the gap between sides with hooks is at least 15 mm (i.e., so that the panel cutout interval is at least 60 mm).
  - 3. It is possible to mount counters side by side, but only in the direction without the hooks. If they are mounted side-by-side, water-resistant specifications cannot be ensured

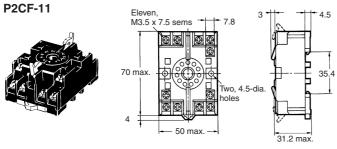

n side by sid	le mounting
A = (48n - 2	A

With Y92A-48F1 attached.  $A = \{48n - 2.5 + (n - 1) \times 4\}_{0}^{+1}$ With Y92A-48 attached.  $A = (51n - 5.5)^{+1}_{0}$ 

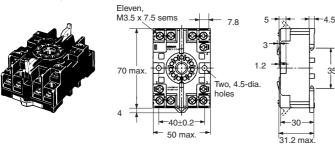

## ■ Accessories (Order Separately)

Note: All units are in millimeters unless otherwise indicated.

#### Hard Cover Y92A-48

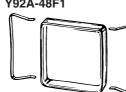

Soft Cover Y92A-48F1

### Flush Mounting Adapter (provided with screw-terminal models)

### Y92F-30

**Mounting DIN-rail** PFP-100N, PFP-50N

- Note: 1. Depending on the operating environment, the condition of the Soft Cover may deteriorate, and it may shrink or become harder. Therefore, it is recommended that the Soft Cover is replaced regularly.
  - 2. The H7CX's panel surface is water-resistive (conforming to IP66) and so even if drops of water penetrate the gaps between the keys, there will be no adverse effect on internal circuits. If, however, there is a possibility of oil being present on the operator's hands, use the Soft Cover. The Soft Cover ensures protection equivalent to IP54F against oil. Do not, however, use the H7CX in locations where it would come in direct contact with oil.

# Precautions

### $-\underline{\land}$ Caution

Do not use the product in locations subject to flammable or explosive gases. Doing so may result in explosion.

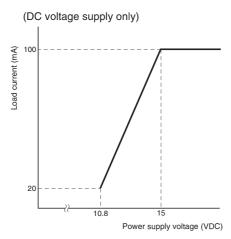

The service life of the output relays depends on the switching capacity and switching conditions. Consider the actual application conditions and use the product within the rated load and electrical service life. Using the product beyond its service life may result in contact deposition or burning.

Do not disassemble, repair, or modify the product. Doing so may result in electric shock, fire, or malfunction.

Do not allow metal objects or conductive wires to enter the product. Doing so may result in electric shock, fire, or malfunction.

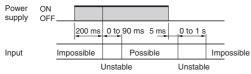

## External Power Supply

The capacity of the external power supply is 100 mA at 12 V. When using a 24 VAC/12 to 24 VDC power supply, reduce the load with the power supply voltage, as shown in the following diagram (DC power supplies only).

## Power Supplies

When turning the power ON and OFF, input signal reception is possible, unstable, or impossible as shown in the diagram below.

Turn the power ON and OFF using a relay with a rated capacity of 10 A minimum to prevent contact deterioration due to inrush current caused by turning the power ON and OFF.

Apply the power supply voltage through a relay or switch in such a way that the voltage reaches a fixed value immediately, otherwise they may not be reset or a counter error may result.

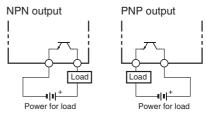

Be sure that the capacity of the power supply is large enough, otherwise the counter may not start due to inrush current (reference value: approx. 10 A, 1.2 ms at 26.4 VAC) that may flow for an instant when the counter is turned ON.

Make sure that the fluctuation of the supply voltage is within the permissible range.

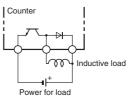

Make sure that the voltage applied is within the specified range, otherwise the internal elements of the counter may be damaged.

## Transistor Output

The transistor output of the H7CX is isolated from the internal circuitry by a photocoupler, so the transistor output can be used as both NPN and PNP output.

The diode connected to the collector of the output transistor is used to absorb inverted voltage that is generated when an inductive load is connected to the H7CX.

## ■ Changing the Set Values

When changing the set value during operation, because the H7CX uses a constant read-in system, output will turn ON if the set value is equal to the present value.

### Operation with a Set Value and Present Value of 0

If the set value and present value are both 0, output will turn ON. Output will turn OFF during reset.

## Using the Prescaling Function

Observe the following points when setting a prescale value.

- Set the set value to a value less than {Maximum countable value Prescale value}.
  - Example: If the prescale value is 1.25 and the counting range is 0.000 to 999.999, set the set value to a value less than 998.749 (= 999.999 1.25).
- If the set value is set to a value greater than this, output will not turn ON.
- Note: Output will turn ON, however, if a present value overflow occurs (FFFFFF or FFFF).
- Setting the prescale value incorrectly may result in incorrect counting operation. Be sure to set the prescale value correctly.

## DIP Switch Setting

Ensure that the power is turned OFF before changing DIP switch settings. Changing DIP switch settings with the power turned ON may result in electric shock due to contact with terminals subject to high voltages.

## ■ Power Failure Backup

All data is stored in the EEPROM when there is power failure. The EEPROM can be overwritten more than 100,000 times. EEPROM is overwritten when the power is turned OFF or when settings are changed.

## ■ Self-diagnostic Function

The following displays will appear if an error occurs.

Main display	Sub-display	Error	Output status	Correction method	Set value after reset
) (See notes 1 and 2.)	No change	Present value underflow (See note 3.)	No change	Either press the reset key or turn ON reset input.	No change
FFFFFF (FFFF) (See notes 1 and 2.)	No change	Present value overflow (See note 4.)	No change	Either press the reset key or turn ON reset input. (See note 5.)	No change
ΕI	Not lit	CPU	OFF	Either press the reset key or reset the power supply.	No change
62	Not lit	Memory error (RAM)	OFF	Reset the power supply.	No change
62	507	Memory error (EEP) (See note 6.)	OFF	Reset to the factory settings using the reset key.	0

Note: 1. The display for 4-digit models is given in parentheses.

- 2. Display flashes (1-second cycles).
- 3. Occurs when the present value or the total count value goes below -99,999 (-999 with 4-digit models).
- 4. Occurs when the present value (or measurement value) reaches 999,999 (9,999 with 4-digit models) under the following conditions:
  •The output mode is K-2, D, L, or H.
- •The H7CX is set for dual counter or tachometer operation.
- 5. Except when the H7CX is set for tachometer operation.
- 6. Includes the case where the EEPROM has reached its overwrite lifetime.

## Response Delay Time When Resetting (Transistor Output)

The following table shows the delay from when the reset signal is input until the output is turned OFF.

(Reference values)

Minimum reset signal width	Output delay time
1 ms	0.8 to 1.2 ms
20 ms	15 to 25 ms

## ■ Output Delay Time

The following table shows the delay from when the present value passes the set value until the output is produced.

Actual measurements in N and K-2 modes. (Reference values)

Control output type	Maximum counting speed	Output delay time
Contact output	30 Hz	16.5 to 24.0 ms
	5 kHz	3.7 to 5.6 ms
Transistor output	30 Hz	12.0 to 20.0 ms
	5 kHz	0.2 to 0.55 ms

Note: The above times may vary slightly depending on the mode or operating conditions.

## Maximum Counting Speed for Batch Counter

The maximum counting speed for batch counter operation is 5 kHz. The batch counter counts the number of times the count reaches the set value.

## Wiring

Wiring input lines in the same conduit as power lines or other highvoltage lines may result in malfunction due to noise. Wire the input lines separately, away from lines carrying high-voltages. In addition, make the input wiring as short as possible and use shield lines or metal wiring conduits.

Pay attention to terminal polarity to ensure correct wiring.

## Mounting

Tighten the two mounting screws on the Adaptor. Tighten them alternately, a little at a time, so as to keep them at an equal tightness.

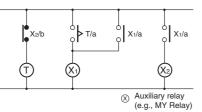

The H7CX's panel surface is water-resistive (conforming to NEMA 4 and IP66). In order to prevent the internal circuit from water penetration through the space between the timer and operating panel, attach a waterproof packing between the timer and installation panel and secure the waterproof packing with the Y92F-30 Flush-mounting Adapter.

It is recommended that the space between the screw head and the adapter should be 0.5 to 1 mm.

## Operating Environment

- Use the product within the ratings specified for submerging in water and exposure to oil.
- Do not use the product in locations subject to vibrations or shocks. Using the product in such locations over a long period may result in damage due to stress.
- Do not use the product in locations subject to dust, corrosive gases, or direct sunlight.
- Separate the input signal devices, input signal cables, and the product from the source of noise or high-tension cables producing noise.
- Separate the product from the source of static electricity when using the product in an environment where a large amount of static electricity is produced (e.g., forming compounds, powders, or fluid materials being transported by pipe).
- Organic solvents (such as paint thinner), as well as very acidic or basic solutions might damage the outer casing of the H7CX.
- Use the product within the ratings specified for temperature and humidity.
- Do not use the product in locations where condensation may occur due to high humidity or where temperature changes are severe.
- Store at the specified temperature. If the H7CX has been stored at a temperature of less than -10°C, allow the H7CX to stand at room temperature for at least 3 hours before use.
- Leaving the H7CX with outputs ON at a high temperature for a long time may hasten the degradation of internal parts (such as electrolytic capacitors). Therefore, use the product in combination with relays and avoid leaving the product as long as more than 1 month with the output turned ON.

• The load current must be within the rated current.

### Insulation

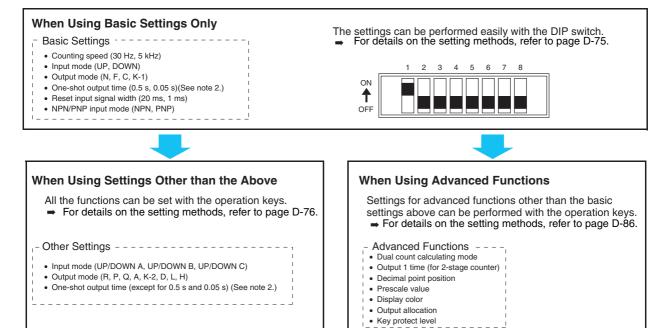

- Specifications call for basic insulation between the power supply and input terminals, between the power supply and output terminals, and between the input and output terminals. (The H7CX-A bis not insulated between the power supply and input terminals.)
- Input and output terminals are connected to devices without exposed charged parts.
- Input and output terminals are connected to devices with basic insulation that is suitable for the maximum operating voltage.

# **Operating Procedures**

## Setting Procedure Guide

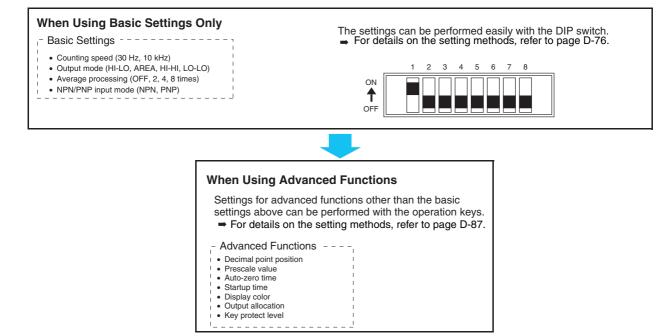

### Setting for Counter Operation

### (1-stage/2-stage Counter, Total and Preset Counter, Batch Counter, Dual Counter)

Note: 1. At the time of delivery, the H7CX is set to the 1-stage counter (2-stage counter for H7CX-AW□/-A4W□ models) configuration. 2. Set to output 2 time when using as a 2-stage counter or batch counter.

### **Setting for Tachometer Operation**

Note: At the time of delivery, the H7CX is set to the 2-stage counter (1-stage counter for H7CX-AU models) configuration.

## Operating Procedures (Counter Function)

Settings for basic functions can be performed with just the DIP switch.

### **Settings for Basic Operations**

		•					
		ON OFF Note:			8		
Γ	Item	OFF	ON	]			
1	DIP switch settings en- able/disable	Disabled	Enabled				
2	Counting speed	30 Hz	5 kHz				
3	Input mode	UP (increment)	DOWN (decre- ment)				
4	Output mode	Refer to the table on the right.			Pin 4	Pin 5	Output mode
5			Ū		OFF	OFF	Ν
6	One-shot output time	0.5 s	0.05 s		ON	OFF	F
	(See note.)				OFF	ON	С

1 ms

PNF

Note: Set to one-shot output 2 time when using as a 2-stage counter or batch counter.

20 ms

NPN

### Easy Confirmation of Switch Settings Using Indicators

The ON/OFF status of the DIP switch pins can be

Reset input signal width

NPN/PNP input mode

8

confirmed using the front display. For details, refer to page D-92.

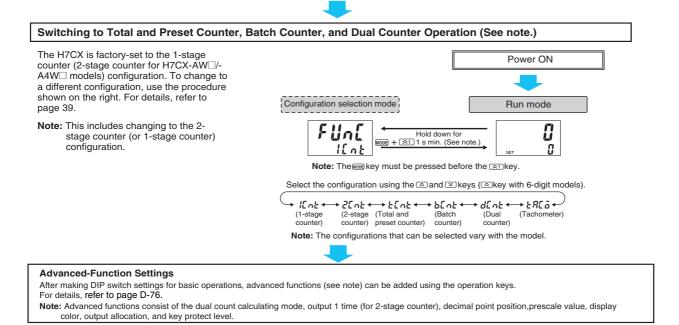

Note: 1. Be sure to set pin 1 of the DIP switch to ON. If it is set to OFF, the DIP switch settings will not be enabled.

- 2. Changes to DIP switch settings are enabled when the power is turned ON.
- 3. When setting input modes, output modes, or output times that cannot be set with the DIP switch, all of the settings have to be made using the operation keys. For details on the setting methods, refer to page D-76. When making settings using the operation keys, be sure to set pin 1 of the DIP switch to OFF.

ON

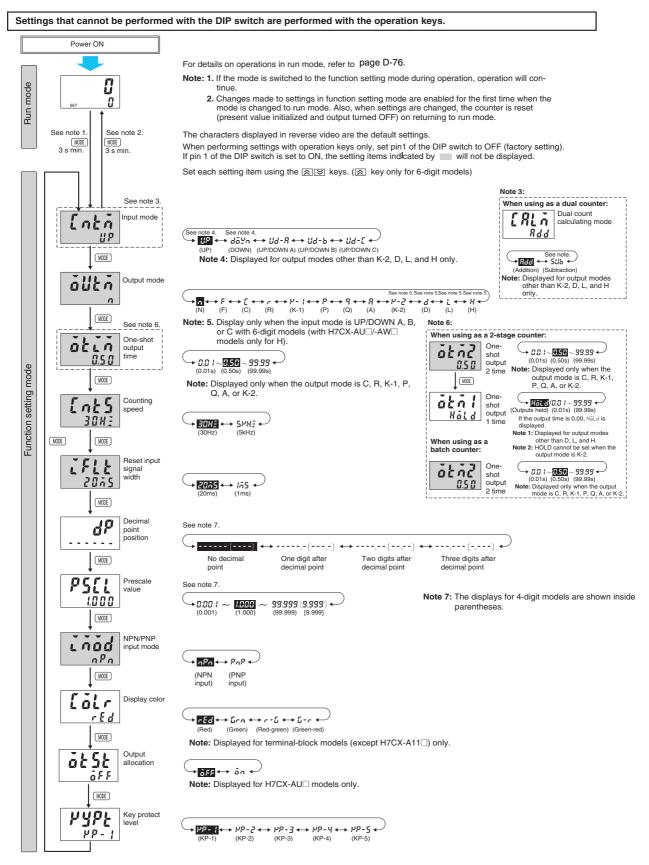

ON

K-1

### Settings for All Functions

Note: At the time of delivery, the H7CX is set to the 1-stage counter (2-stage counter for H7CX-AWU/-A4W models) configuration. When using as a 2-stage (or 1-stage) counter, total and preset counter, batch counter, or dual counter, switch to the configuration using the procedure given on page D-92.

### **Explanation of Functions**

#### Input Mode (Lobo) (Setting possible using DIP switch.)

Set increment mode (UP), decrement mode (DOWN), or one of the increment/decrement modes (UP/DOWN A, UP/DOWN B, or UP/DOWN C) as the input mode. Input modes other than UP or DOWN modes cannot be set using the DIP switch and so use the operation keys if other modes are required. (For details on the operation of the input modes, refer to Input Modes and Present Value on page D-80.)

#### Dual Count Calculating Mode ([RL])

When using as a dual counter, select either ADD (addition) or SUB (subtraction) as the calculation method for the dual count value. SUB mode can be used only when K-2, D, L, or H is selected as the output mode with 6-digit models.

ADD: Dual count value = CP1 PV + CP2 PV

SUB: Dual count value = CP1 PV - CP2 PV

#### Output Mode (auton) (Setting possible using DIP switch.)

Set the way that control output for the present value is output. The possible settings are N, F, C, R, K-1, P, Q, A, K-2, D, L, and H. Output modes other than N, F, C, or K-1 cannot be set using the DIP switch and so use the operation keys if other modes are required. The output modes that can be set vary with the model. (For details on the operation of the output modes, refer to Input/Output Mode Settings on page D-81.)

## One-shot Output Time $(\bar{a} E_{L} \bar{n})$ (Setting possible using DIP switch.)

Set the one-shot output time (0.01 to 99.99 s) for control output. One-shot output can be used only when C, R, K-1, P, Q, A, or K-2 is selected as the output mode. Output times other than 0.5 s or 0.05 s cannot be set with the DIP switch and so use the operation keys if other settings are required.

## One-shot Output 2 Time ( $\bar{a} \pm \bar{n} \bar{c}$ ) (Setting possible using DIP switch.)

When using as a 2-stage counter or batch counter, set the one-shot output time (0.01 to 99.99 s) for control output (OUT2). One-shot output can be used only when C, R, K-1, P, Q, A, or K-2 is selected as the output mode. Output times other than 0.5 s or 0.05 s cannot be set with the DIP switch and so use the operation keys if other settings are required.

#### One-shot Output 1 Time (ākā /)

When using as a 2-stage counter, set the one-shot output time (0.01 to 99.99 s) for control output (OUT1). One-shot output can be used only when D, L, or H is selected as the output mode. If the output time is set to 0.00, HaLd is displayed, and outputs are held. HOLD cannot be set when the output mode is K-2.

# Counting Speed (*Locb*) (Setting possible using DIP switch.)

Set the maximum counting speed (30 Hz/5 kHz) for CP1 and CP2 inputs together. If contacts are used for input signals, set the counting speed to 30 Hz. Processing to eliminate chattering is performed for this setting.

# Reset Input Signal Width ( $\[ \[ \] FLE \] \]$ ) (Setting possible using DIP switch.)

Set the reset input signal width (20 ms/1 ms) for reset/reset 1 and total reset/reset 2 inputs together. If contacts are used for input signals, set the counting speed to 20 ms. Processing to eliminate chattering is performed for this setting.

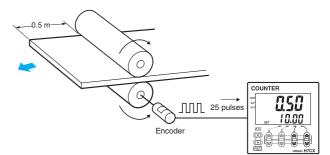

#### Decimal Point Position (dP)

Decide the decimal point position for the present value, CP1/CP2 present values, set value (SV1, SV2), total count value, and dual count set value.

#### Prescale Value (PSEL)

Pulses input to the counter are converted according to the specified prescale value. (Setting range: 0.001 to 99.999 for 6-digit models and 0.001 to 9.999 for 4-digit models.)

- Example: To display the feed distance for systems that output 25 pulses for a feed length of 0.5 m in the form  $\Box$ .  $\Box$  m:
  - 1. Set the decimal point position to 2 decimal places.
  - 2. Set the prescale value to 0.02 (0.5÷25).

### NPN/PNP Input Mode (Linod)

Select either NPN input (no-voltage input) or PNP input (voltage input) as the input format. The same setting is used for all external inputs. For details on input connections, refer to *Input Connection* on page D-64.

#### Display Color (LoLr)

Set the color used for the present value.

	Output OFF (See note.)	Output ON (See note.)				
rEd	Red (fixed)					
Grn	Green (fixed)					
r - G	Red	Green				
<u> 6-r</u>	Green	Red				

Note: When using as a 2-stage counter, this is the status of output 2.

#### Output Allocation (5252)

When using H7CX-AU $\square$  models as a 2-stage counter, the output can be flexibly allocated to either stage 1 or 2.

Transistor output can be allocated to SV1 and contact output for SV2 or vice verse, as in the following table.

#### H7CX-AU/-AUD1

	OUT1	OUT2
ōFF	Transistor (12-13)	Contact (3, 4, 5)
ōn	Contact (3, 4, 5)	Transistor (12-13)

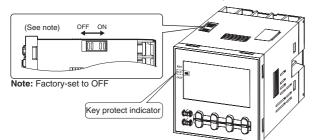

#### H7CX-AUSD1

	OUT1	OUT2
ōFF	Transistor (12-13)	Transistor with diode (3, 4, 5)
ōn	Transistor with diode (3, 4, 5)	Transistor (12-13)

### Key Protect Level (HUPE)

Set the key protect level.

When the key-protect switch in set to ON, it is possible to prevent setting errors by prohibiting the use of certain operation keys by specifying the key protect level (KP-1 to KP-5). The key protect indicator is lit while the key-protect switch is set to ON. Confirm the ON/OFF status of the key-protect switch after the H7CX is mounted to the panel.

Level	Meaning	Details			
		Changing mode (See note.)	Switching display in run mode	Reset key	Up/down key (Up key for 6-digit models)
KP-1 (default setting)	MODE	No	Yes	Yes	Yes
KP-2	MODE	No	Yes	No	Yes
KP-3	MODE 5 2 COLOR OF THE COLOR OF	No	Yes	Yes	No
KP-4	MODE T T T T T T T T T T T T T T T T T T T	No	Yes	No	No
KP-5		No	No	No	No

Note: Changing mode to configuration selection mode (MODE + <u>still</u> 1 s min.) or function setting mode (MODE 3 s min.).

### **Operation in Run Mode**

Set values for each digit as required using the a and b keys. (a key only for 6-digit models.)

$$\bigcirc 0 \leftrightarrow ! \leftrightarrow ? \leftrightarrow 3 \leftrightarrow 4 \leftrightarrow 5 \leftrightarrow 5 \leftrightarrow 7 \leftrightarrow 8 \leftrightarrow 9 \leftarrow$$

#### 1-stage Counter

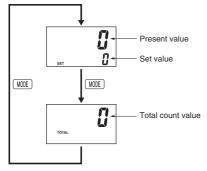

2-stage Counter

#### **Present Value**

#### Shows the present count value.

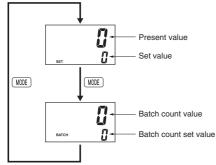

**Set Value (Set Value 1, Set Value 2)** Set the set value. When the present value reaches the set value, signals are output according to the specified output mode.

Present Value/Set Value Same as 1-stage counter. Total Count Value Shows the present total count value.

#### **Batch Counter**

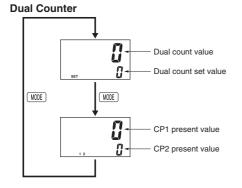

#### **Batch Count Value**

Shows the number of times the count has been completed for the present value.

#### **Batch Count Set Value**

Set the batch count set value. When the batch count value reaches the batch count set value, batch output (OUT1) turns ON.

#### **Dual Count Value**

Shows the sum of the CP1 present value and CP2 present value when the dual count calculating mode is ADD and shows the value obtained by subtracting the CP2 present value from the CP1 present value when the dual count calculating mode is SUB.

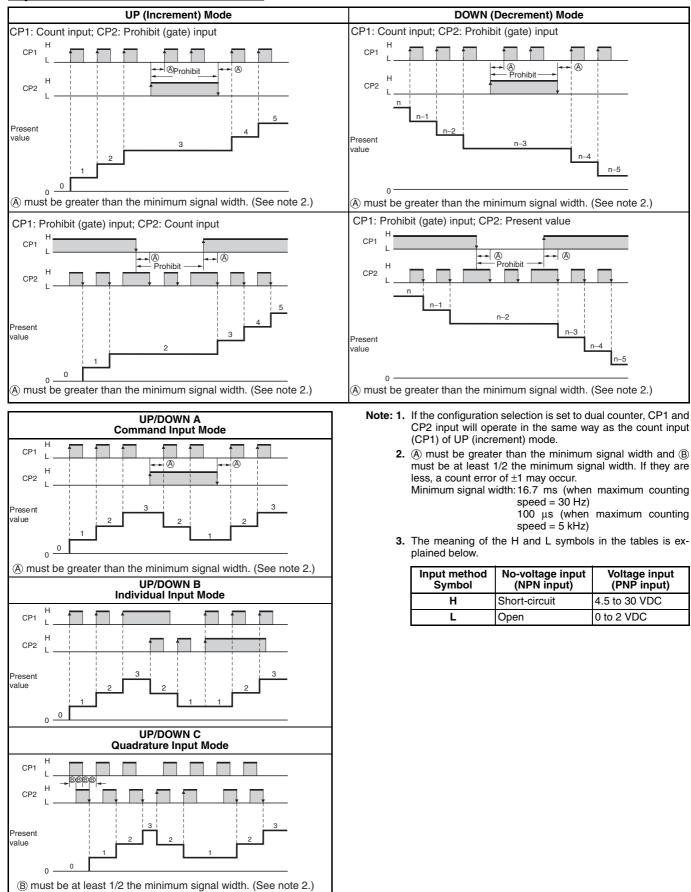

#### **Dual Count Set Value**

Set the dual count set value. When the dual count value reaches the dual count set value, signals are output according to the specified output mode.

#### **CP1/CP2** Present Value

Show the present count values for CP1 and CP2 present values respectively.

### **Input Modes and Present Value**

(The one-shot output time can be set in the range 0.01

to 99.99s.)

One-shot output from OUT2

One-shot output from OUT1

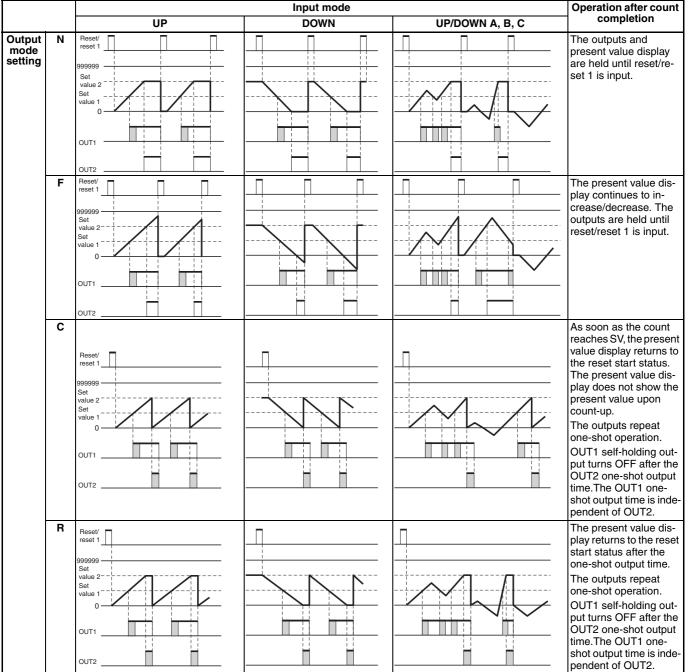

Self-holding output

Self-holding output

### Input/Output Mode Settings

Operation for 1-stage models is the same as that for OUT2.

When using a 2-stage model as a 1-stage counter, total and preset counter, or dual counter, OUT1 and OUT2 turn ON and OFF simultaneously.

Note: 1. The full scale (FS) for H7CX 4-digit models is 9999.

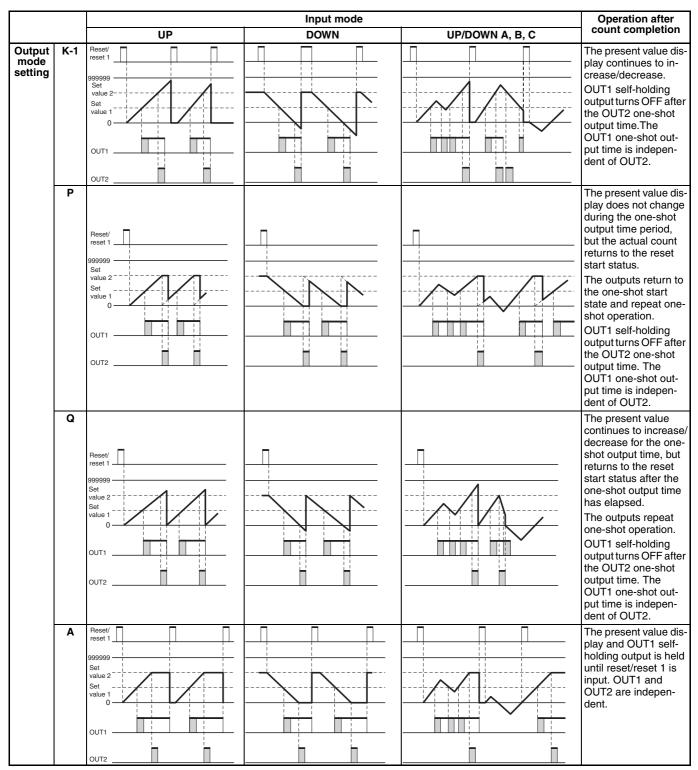

2. When the present value reaches 999999, it returns to 0.

3. Counting cannot be performed during reset/reset 1 input.

4. If reset/reset 1 is input while one-shot output is ON, one-shot output turns OFF.

5. If there is power failure while output is ON, output will turn ON again when the power supply has recovered. For one-shot output, output will turn ON again for the duration of the output time setting once the power supply has recovered.

6. Do not use the counter function in applications where the count may be completed (again) while one-shot output is ON.

Note: 1. The full scale (FS) for H7CX 4-digit models is 9999.

2. When the present value reaches 999999, it returns to 0.

3. Counting cannot be performed during reset/reset 1 input.

4. If reset/reset 1 is input while one-shot output is ON, one-shot output turns OFF.

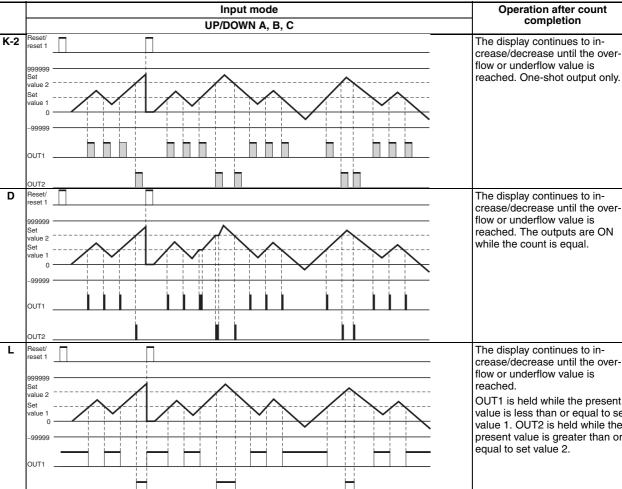

5. If there is power failure while output is ON, output will turn ON again when the power supply has recovered. For one-shot output, output will turn ON again for the duration of the output time setting once the power supply has recovered.

6. Do not use the counter function in applications where the count may be completed (again) while one-shot output is ON.

## OMBOI

(The one-shot output time can be set in the range 0.01 to 99.99s.)

Note: 1. Counting cannot be performed during reset/reset 1 input.

setting

2. If reset/reset 1 is input while one-shot output is ON, one-shot output turns OFF.

3. If there is power failure while output is ON, output will turn ON again when the power supply has recovered. For one-shot output, output will turn ON again for the duration of the output time setting once the power supply has recovered.

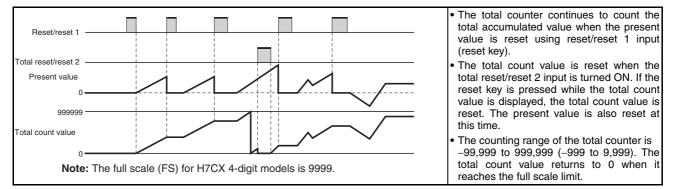

4. Do not use the counter function in applications where the count may be completed (again) while one-shot output is ON.

value is greater than or equal to set value 1. OUT2 is held while the present value is greater than or equal to set value 2. Note:

H mode is available only when using a 6-digit model as a 2stage counter.

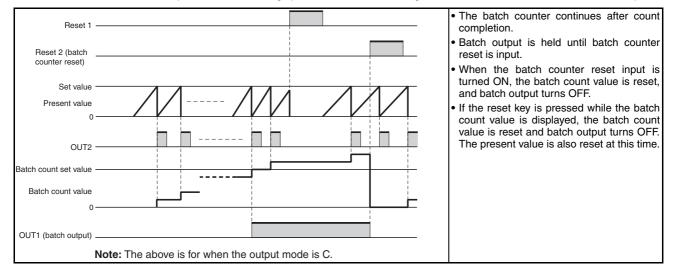

### **Total and Preset Counter Operation**

The H7CX has a total counter, separate from the 1-stage preset counter, for counting the total accumulated value.

### **Batch Counter Operation**

The H7CX has a batch counter, separate from the 1-stage preset counter, for counting the number of times the count has been completed.

Note: 1. The batch count value is held at 0 during batch counter reset input.

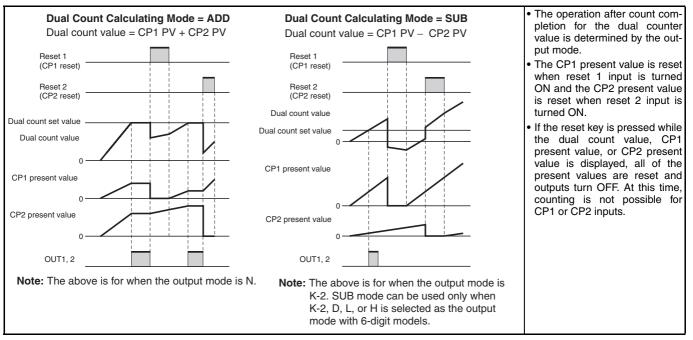

2. If the batch count set value is 0, batch count will be performed but there will be no batch output.

3. The batch count value returns to 0 when it reaches 999,999 (9,999 for 4-digit models).

- 4. Once batch input has been turned ON, it will return to the ON state after power interruptions.
- 5. If the batch count set value is changed from a value that is greater than the batch count value to one that is less, batch output will turn ON.
- 6. After batch output turns ON, the ON state will be held even if the batch count set value is changed to a value greater than the batch count value.

### **Dual Counter Operation**

Using the dual counter allows the count from 2 inputs to be added or subtracted and the result displayed. It is possible to specify a set value for which output turns ON when the set value matches the added or subtracted result. OUT1 and OUT2 turn ON and OFF simultaneously.

Note: 1. Counting is not possible for CP1 during reset 1 input. CP2 will not be affected. The dual count value will be calculated based on a CP1 present value of 0.

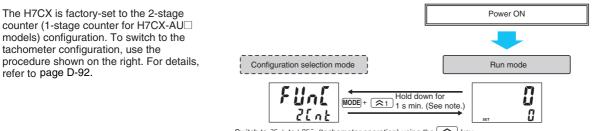

- 2. Counting is not possible for CP2 during reset 2 input. CP1 will not be affected. The dual count value will be calculated based on a CP2 present value of 0.
- 3. The counting range for the dual count value is -99,999 to 999,999 (-999 to 9,999 for 4-digit models). The counting ranges for the CP1 present value and CP2 present value are 0 to 999,999 (0 to 9,999 for 4-digit models). If a present value exceeds 999,999 (9,999 for 4-digit models), FFFFF (FFFF for 4-digit models) will be displayed to indicate an overflow, and all counting will stop.

### Reset Function List

Function	1-stage/2-stage counter	Total and pr	and preset counter Batch counter		Dual counter		
Screen dis- played in run mode	Present value/ set value (1, 2)	Present value/ set value	Total count value	Present value/ set value	Batch count value/batch count set value	Dual count value/dual count set value	CP1 present value/CP2 present value
Reset/reset 1	Present value and output reset.	Present value and output reset.		Present value and output reset.		Only the CP1 present value is re- set.	
Total reset/re- set 2	No effect.	Only the total count value is reset.		Batch count value and batch output reset.		Only the CP2 present value is re- set.	
Reset key	Present value and output reset.		Present value, total count value, and output reset.	and output reset.	Present value, batch count val- ue, output and batch output re- set.	CP1 present value value, dual count reset.	

## Operating Procedures (Tachometer Function)

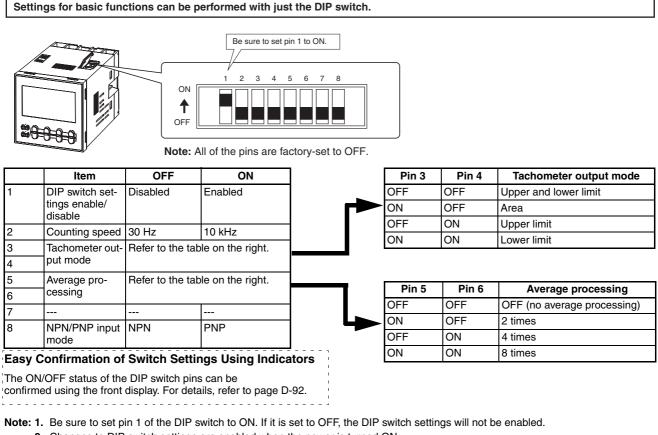

### Switching from Counter to Tachometer

Switch to  $2L_{DE}$  to  $LBL_{a}$  (tachometer operation) using the  $\bigcirc$  key.

Note: The MODE key must be pressed before the ( A1 key.

### Settings for Basic Operations

2. Changes to DIP switch settings are enabled when the power is turned ON.

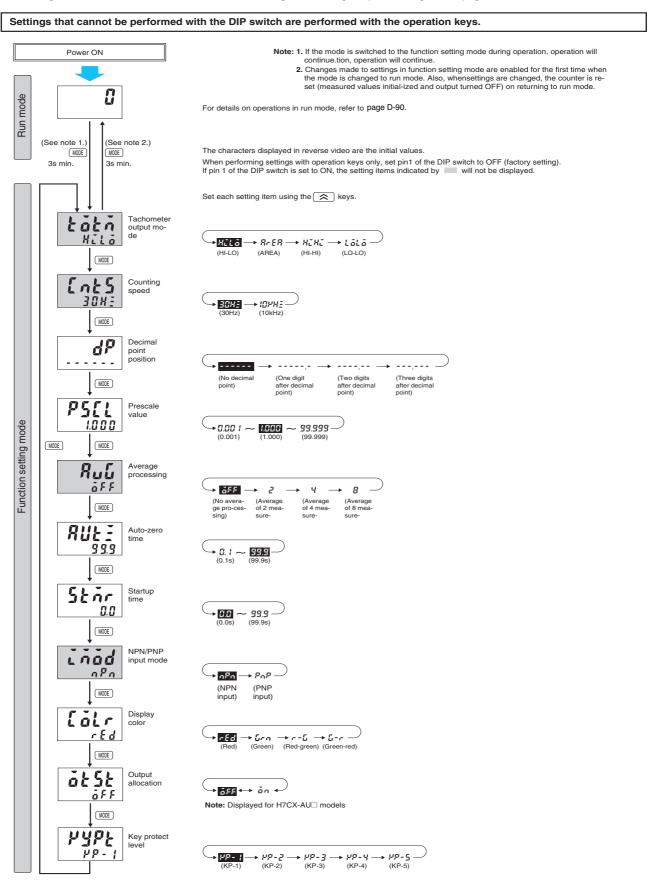

#### Advanced-Function Settings

After making DIP switch settings for basic operations, advanced-functions (see note) can be added using the operation keys. For details, refer to page D-76.

Note: Advanced functions consist of decimal point position, prescale value, auto-zero time, startup time, display color, output allocation, and key protect level.

### **Settings for Advanced Functions**

Note: When using as a tachometer, switch to the tachometer configuration using the procedure given on page D-92.

### **Explanation of Functions**

## Tachometer Output Mode (*Eakn*) (Setting possible using DIP switch.)

Set the output method for control output based on the OUT1/OUT2 set value. Upper and lower limit (HI-LO), area (AREA), upper limit (HI-HI), and lower limit (LO-LO) can be set.

(For details on the operation of the output modes, refer to Output Mode Settings on page D-91.)

# Counting Speed (*Ln*25) (Setting possible using DIP switch.)

Set the maximum counting speed (30 Hz/10 kHz) for CP1 input. If contacts are used for input signals, set the counting speed to 30 Hz. Processing to eliminate chattering is performed for this setting.

### Decimal Point Position (dP)

Decide the decimal point position for the measurement value, OUT1 set value, and OUT2 set value.

#### Prescale Value (PSEL)

It is possible to display the rate of rotation or the speed of a device or machine to which the H7CX is mounted by converting input pulses to a desired unit. If this prescaling function is not used, the input frequency (Hz) will be displayed.

The relationship between display and input is determined by the following equation. Set the prescale value according to the unit to be displayed.

Displayed value =  $f \times a$ f: Input pulse frequency (number of pulses in 1 second)

a: Prescale value

1. Displaying Rotation Rate

Display unit	Prescale value (a)	
rpm	1/N × 60	
rps	1/N	

N: Number of pulses per revolution

Example: In order to display the rate of rotation for a machine that outputs 5 pulses per revolution in the form  $\Box \Box$ . rpm:

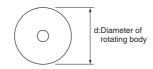

- 1. Set the decimal point position to 1 decimal place.
- 2. Using the formula, set the prescale value to  $1/N\times 60=60/5=12.$

#### 2. Displaying Speed

Display unit	Prescale value (a)		
m/min	$\pi d \times 1/N \times 60$		
m/s	$\pi d \times 1/N$		

- N: Number of pulses per revolution
- d: Diameter of rotating body (m)

 $\pi$ d: Circumference (m)

# Average Processing (RUG) (Setting possible using DIP switch.)

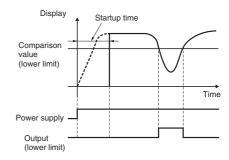

Flickering display and output chattering can be prevented using average processing (simple averaging). Average processing can be set to one of four levels: no average processing, 2 times (i.e., the average of 2 measurement values), 4 times, or 8 times. The measurement cycle will be equal to the sampling cycle (200 ms) multiplied by the average processing setting (i.e., the number of times). Average processing enables fluctuating input signals to be displayed stably. Set the optimum number of times for the application.

#### Auto-zero Time (RUEE)

It is possible to set the H7CX so that if there is no pulse for a certain time the display is force-set to 0. This time is called the auto-zero time. Set the auto-zero time to a time slightly longer than the estimated interval between input pulses and within the setting range (0.1 to 99.9 s). It will not be possible to make accurate measurements if the auto-zero time is set to a time shorter than the input pulse cycle. Setting a time that is too long may also result in problems, such as a time-lag between rotation stopping and the alarm turning ON.

#### Startup Time (Start)

In order to prevent undesired output resulting from unstable input immediately after the power supply is turned ON, it is possible to prohibit measurement for a set time (0.0 to 99.9 s), the startup time. It can also be used to stop measurement and disable output until the rotating body reaches the normal rate of rotation, after the power supply to the H7CX and rotating body are turned ON at the same time.

#### NPN/PNP Input Mode (inid)

Select either NPN input (no-voltage input) or PNP input (voltage input) as the input format. The same setting is used for all external inputs. For details on input connections, refer to *The circuit shown above is for no-voltage input (NPN input).* on page D-64.

#### Display Color (LoLr)

Set the color used for the measurement value.

Setting	Control output OFF	Control output ON			
rEd	Red (fixed)				
Grn	Green (fixed)				
<i>┌ −[_</i> (See note 1.)	Measured value displayed in red when both control outputs 1 and 2 are OFF.	Measured value displayed in green when either control output 1 or control output 2 is ON.			
<i>に-</i> - (See note 2.)	Measured value displayed in green when both control outputs 1 and 2 are OFF.	Measured value displayed in red when either control output 1 or control output 2 is ON.			

- **Note: 1.** If the tachometer output mode is set to AREA, however, the measured value is displayed in red when control output 1 is OFF and in green when control output 1 is ON.
  - 2. If the tachometer output mode is set to AREA, however, the measured value is displayed in green when control output 1 is OFF and in red when control output 1 is ON.

### Output Allocation (ab5b)

When using H7CX-AU  $\square$  models as 2-stage counter, each output can be flexibly allocated to either stage 1 or 2.

Transistor output placed for SV1 and contact output for SV2 or vice verse, as in the following table.

#### H7CX-AU/-AUD1

	OUT1	OUT2
ōFF	Transistor (12-13)	Contact (3, 4, 5)
ōn	Contact (3, 4, 5)	Transistor (12-13)

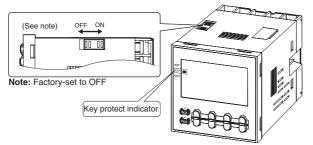

### H7CX-AUSD1

	OUT1	OUT2
ōFF	Transistor (12-13)	Transistor with diode (3, 4, 5)
ōn	Transistor with diode (3, 4, 5)	Transistor (12-13)

#### Key Protect Level (PGPE)

Set the key protect level.

When the key-protect switch in set to ON, it is possible to prevent setting errors by prohibiting the use of certain operation keys by specifying the key protect level (KP-1 to KP-5). The key protect indicator is lit while the key-protect switch is set to ON. Confirm the ON/OFF status of the key-protect switch after the H7CX is mounted to the panel.

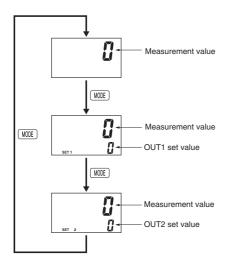

Level	Meaning	Details				
		Changing mode (See note.)	Switching display during operation	Reset key	Up/down key (Up key for 6-digit models)	
KP-1 (default setting)	MODE 4 7 CONTROL 17CX	No	Yes	Yes	Yes	
КР-2		No	Yes	No	Yes	
КР-3	MODE	No	Yes	Yes	No	
КР-4	MODE TO THE MODE T	No	Yes	No	No	
КР-5		No	No	No	No	

Note: Changing mode to configuration selection mode (MODE + 😒1) 1 s min.) or function setting mode (MODE 3 s min.).

### **Operation in Run Mode**

Set values for each digit as required using the  $\fbox$  key.

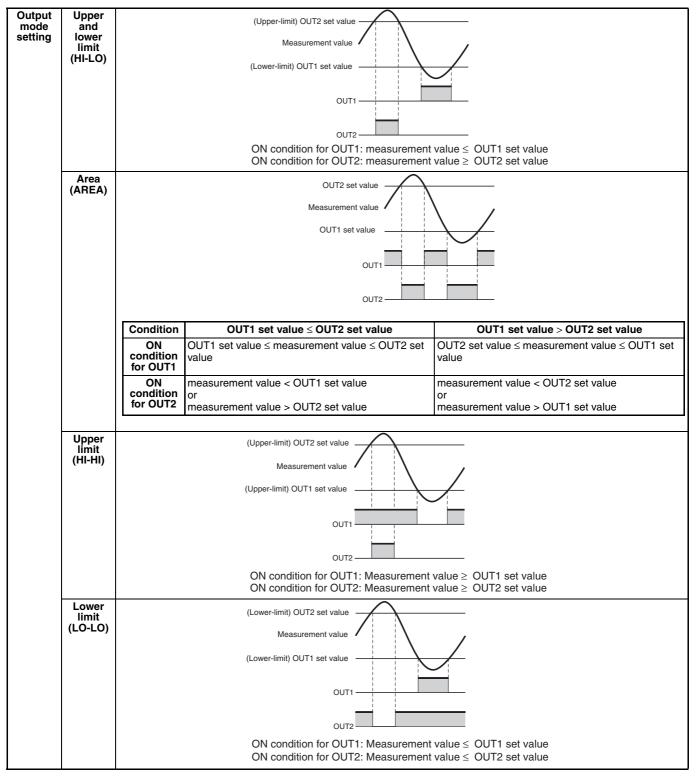

#### **Measurement Value** Displays the currently measured value.

#### OUT1/OUT2 Set Value

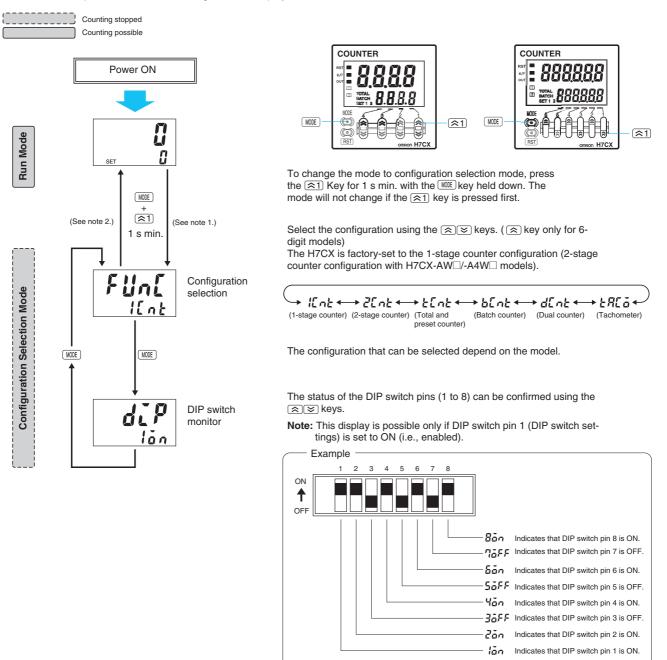

Set OUT1 set value and OUT2 set value. The measurement value is compared to OUT1 set value and OUT2 set value and output is made according to the selected output mode.

### **Output Mode Settings**

## Operation in Configuration Selection Mode

Select which H7CX configuration is used (i.e., 1-stage counter, 2-stage counter, total and preset counter, batch counter, dual counter, or tachometer) in configuration selection mode. The H7CX is also equipped with a DIP switch monitor function, a convenient function that enables the settings of the DIP switch pins to be confirmed using the front display.

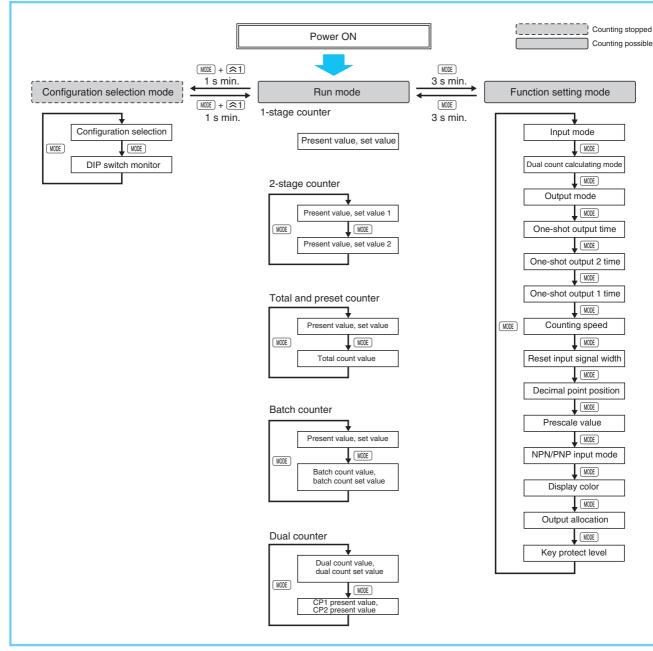

Note: 1. When the mode is changed to configuration selection mode, the present value is reset, outputs turns OFF, and counting (measuring) stops.

2. Setting changes made in configuration selection mode are enabled when the mode is changed to run mode. If the configuration is changed, the set value (or set value 1 and set value 2), OUT1 set value or OUT2 set value are initialized.

## ■ Using the Operation Keys

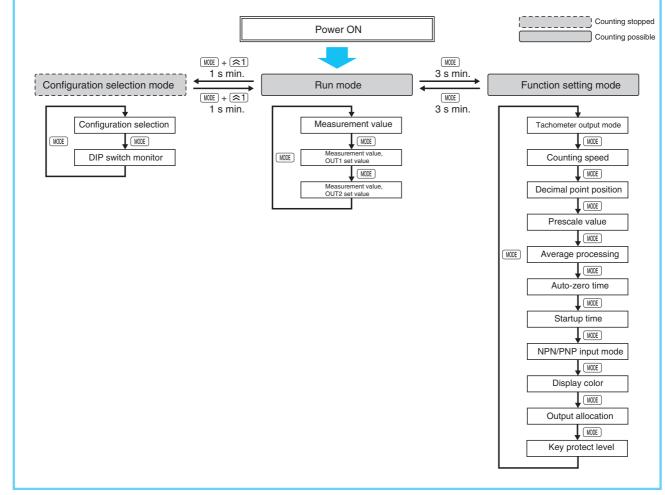

### **Counter Operation**

Note: 1. Perform settings using the  $\bigcirc$  and  $\bigcirc$  keys ( $\bigcirc$  key only with 6-digit models).

2. The above flowcharts outline the procedures for all models. For more details on each model, refer to page D-75.

### **Tachometer Operation**

- Note: 1. All setting changes are performed using the  $\bigcirc$  key.
  - **2.** For details, refer to page D-87.

## ■ Lists of Settings

Fill in your set values in the set value column of the following tables and utilize the tables for quick reference.

### **Configuration Selection Mode**

Parameter name	Parameter	Setting range	Default value	Unit	Set value
Configuration selection	FUnE	เ็กะ/2็โกะ/ะโกะ/bโกะ/dโกะ/ะRโอ้ (See note 1.)	ା⊑ଳ⊧ (See note 2.)		
DIP switch monitor	dīP	ān/āFF	ōFF		

Note: 1. The setting range varies with the model.

**2.** The default value for H7CX-AW $\square$ /-A4W $\square$  models is  $2 E_{\square} E$ .

### **Settings for Counter Operation**

### **Run Mode**

### • 1-stage Counter

Parame	ter name	Parameter	Setting range	Setting range Default value Unit		Set value	
,	Present value		-99999 to 999999 (-999 to 9999)	0			
set value	Set value		Set value D to 999999 (D to 9999) (For conditions other than those described in note 1.)		0		
			-99999 to 999999 (-999 to 9999) (See note 1.)				

#### • 2-stage Counter

Parame	ter name	Parameter	Setting range	Default value	Unit	Set value
Present value,	Present value		-99999 to 999999 (-999 to 9999)	0		
set value 1	Set value 1		1) to 555555 (1) to 5555) (For conditions other than those described in note 1.)	0		
			-99999 to 999999 (-999 to 9999) (See note 1.)	0		
Present value,	Present value		-99999 to 999999 (-999 to 9999)	0		
set value 2	Set value 2		1) to 555555 (1) to 5555) (For conditions other than those described in note 1.)	0		
			-99999 to 999999 (-999 to 9999) (See note 1.)	0		

#### • Total and Preset Counter

Paramet	ter name	Parameter	Setting range	Default value	Unit	Set value
,	Present value		-99999 to 999999 (-999 to 9999)	0		
set value	Set value		If to 333333 (I) to 3333 (For conditions other than those described in note 1.)	0		
			-99999 to 999999 (-999 to 9999) (See note 1.)			
Total count value	9		-99999 to 999999 (-999 to 9999)	0		

#### Batch Counter

Parame	arameter name Pa		Parameter name Parameter Setting range		Setting range	Default value	Unit	Set value
Present value,	Present value		-99999 to 999999 (-999 to 9999)	0				
set value	Set value		10 to 9999999 (10 to 9999) (For conditions other than those described in note 1.)	0				
			-39999 to 999999 (-999 to 9999) (See note 1.)					
Batch count value, batch	Batch count value		0 to 999999 (0 to 9999)	0				
count set value	Batch count set value		0 to 999999 (0 to 9999)	0				

### • Dual Counter

Paramet	Parameter name		Setting range	Default value	Unit	Set value
Dual count	Dual count value		-99999 to 999999 (-999 to 9999)	0		
value, dual count set value	Dual count set value		1 to 333333 (1) to 3333) (For conditions other than those described in note 2.)	0		
			-99999 to 999999 (-999 to 9999) (See note 2.)			
CP1 present value, CP2	CP1 present value		0 to 999999 (0 to 9999)	0		
	CP2 present value		0 to 999999 (0 to 9999)	0		

Note: 1. The input mode is increment/decrement mode and the output mode is K-2, D, L, or H.

2. The dual count calculating mode is subtraction mode and the output mode is K-2, D, L, or H.

### **Function Setting Mode**

Parameter name	Parameter	Setting range	Default value	Unit	Set value
Input mode	Entri	ป₽/dagn/Ud-A/Ud-b/Ud-E (See note 1.)	UP		
Dual count calculating mode	ERLn	Rdd/5Ub (See note 1.)	Rdd
